

The perfect floor for a beautiful home.

Virtual Floor Studio

To help visualise your design concept, our Virtual Floor Studio allows you to take a picture of your own room and try out hundreds of design and layout options before making your final decision.

The best part... all of this can be done in the comfort of your own home using your smart phone, tablet or PC.

The perfect floor for a beautiful home

PROJECT FLOORS beautiful design flooring collection is a selection of traditional and contemporary flooring designs, specially selected to provide a timeless finish to any room.

Our luxury vinyl tile floor coverings provide the look of a real wood, stone, slate or ceramic floor coupled with the durability and ease of maintenance of a vinyl floor.

Due to the carefully selected surface textures and realistic acoustics, our floors deliver a truly authentic experience.

floors@home | floors@work

Each unique design in our UK wood plank and tile collections is available in both residential and commercial qualities, providing you with a beautiful flooring option... wherever the location.

Advantages

Our floors are not limited to certain rooms. Because they are resistant to moisture and humidity they will not swell, crack or break. Whether it's tiles in the kitchen or a rustic wood floor in the bathroom, it's no problem at all.

Our floors are fully compatible with under floor heating so nobody has to get cold feet when winter comes. They are also easy to maintain and cost effective to clean.

Peace of mind

PROJECT FLOORS were the first luxury vinyl tile supplier in Europe not to use phthalate plasticizers in the manufacturing of its entire floor coverings range. Our products use the safe alternative Hexamoll® DINCH®, developed by BASF for use in vinyl applications involving close human contact.

All of our floors are certified Gold standard for indoor air comfort by the *eurofins* testing agency.

Sustainability

All raw materials used in our products, including all recycled content, have full traceability. Please see page 147 of this brochure for details of our CO2 compensation initiatives.

Wood Collection

Oak - PW 1231

Size of plank: 914 x 102mm (36" x 4")

Hand Scraped Oak - PW 1250

Size of plank: 1219 x 183mm (48" x 7.2")

Herringbone Collection

The origins of the herringbone pattern can be traced as far back as ancient Egypt and the Roman Empire.

The design enjoyed a renaissance in France throughout the 16th, 17th and 18th centuries and first became popular in Britain during the 1930's.

This classic design format has endured millennia and is just as popular today as it has ever been.

PROJECT FLOORS collection of classic and contemporary parquet designs have been specially chosen to provide a timeless and elegant finish to any room.

Due to the carefully selected surface textures and incredible attention to detail, our Herringbone Collection creates a truly authentic parquet floor effect and is suitable for most rooms in the home, including kitchens and bathrooms.

Each design in our Herringbone Collection is also available in a matching full size plank format.

Herringbone Stone Collection

Our incredibly popular *Herringbone Collection* has now been extended to include a selection of spectacular marble and stone designs.

This contemporary take on the traditional herringbone format looks equally stunning in a living room, bathroom or kitchen.

Choose from either of our beautiful marble designs, Carrara and Marquina, or one of our incredibly authentic stone designs, Milano or Toulon.

Whichever design you choose is sure to add a unique and elegant finish to your living space.

Chevron Collection

Chevron is a classic French Parquet design that provides an elegance reminiscent of the grand homes of the 17th century

This stylish hardwood format has now been faithfully reproduced by PROJECT FLOORS in our beautiful Chevron Collection.

Each plank is manufactured in the special size of 457 x 102mm with the ends cut at a 60 degree angle to achieve the classic Chevron look.

The Chevron Collection is suitable for every room in the home, including kitchens and bathrooms, as well as for the majority of commercial locations.

Matching full sized planks are also available for each design in the range.

Design Strips

Design Strips are a fantastic way to create a totally unique floor design.

They can be used to replicate grout lines in between tiles where the colour of the design strip can make a marked difference to the overall look of the floor.

They can also be used to create a ships decking effect between planks or even as part of a border design.

Design Strips are available in both 3mm & 5mm widths

3mm wide Design Strip

5mm wide Design Strip

Indoor Air Climate

PROJECT FLOORS floor coverings are regularly and repeatedly tested for emissions to avoid influence on the indoor climate in commercial and residential buildings.

All raw materials used in our products, including all recycled content, have full traceability.

Phthalate Free Plasticizers

PROJECT FLOORS were the first LVT supplier in Europe not to use Phthalate plasticizers in the manufacturing of its entire floor coverings range. Instead our products use the safe alternative **Hexamoll® DINCH®** developed by **BASF** for use in vinyl applications involving close human contact such as toys, medical products and food packaging.

Where else is Hexamoll® DINCH® used?

Medical equipment
Outstanding toxicological qualities

Toys and children's products
Approved for infant products

Food packaging
More than 6 times better values for migration into food

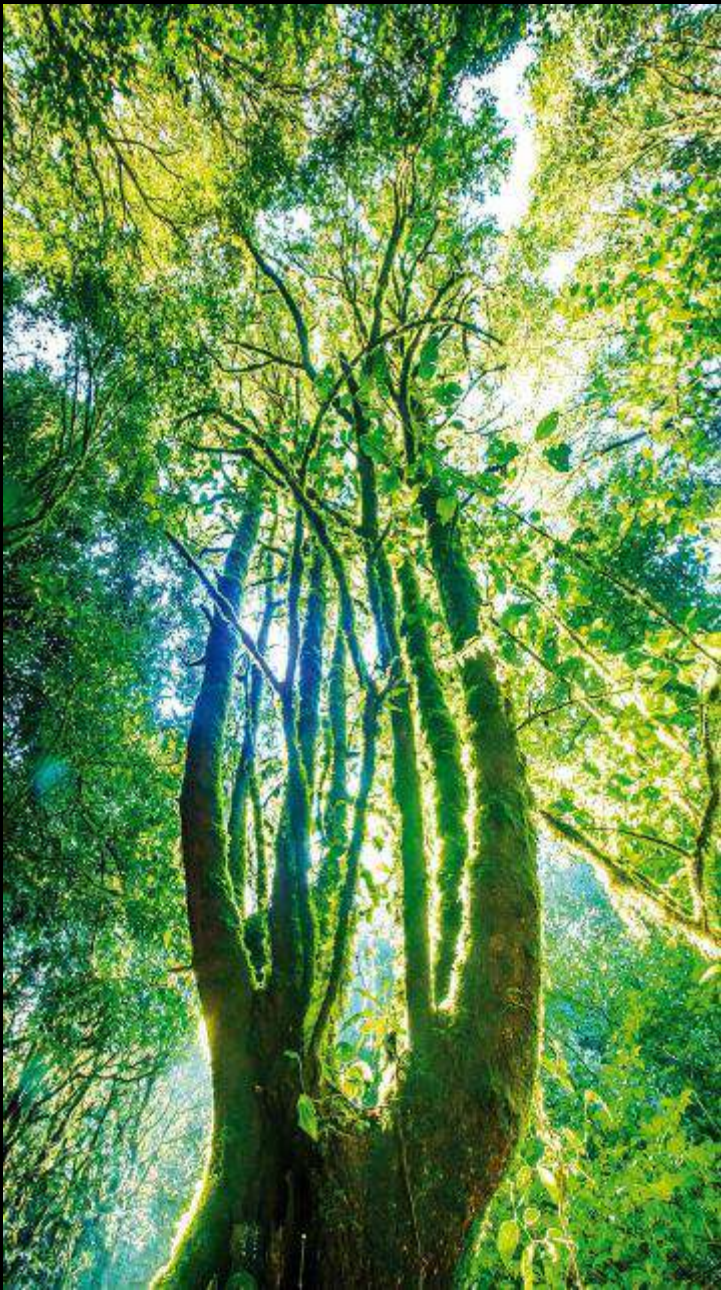

CO2 Compensation Initiatives

PROJECT FLOORS considers climate protection to be a very important issue and strives to contribute in the best possible way.

In order to reduce CO2 emissions from our manufacturing, 7,200 sqm of photovoltaic panels were installed during the construction of our new production facility. These solar panels now account for 14% of our overall energy consumption.

In order to offset the CO2 emissions produced during the transportation of our floorings, we work closely with the experts at EnergieAgentur.NRW. Our procedure to regularly calculate the emissions for ship, road and rail transportation has been verified as transparent, authentic and accurate. We then compensate for these emissions by supporting reforestation of rain forests in the Amazon Basin through the non-profit association PRIMAKLIMA.

This project not only plants trees, it also teaches new agricultural techniques to the native farmers. The results of this policy are better and more sustainable crops, rather than repeated clearing of the rain forest, providing nature with the protection that it deserves.

FLOOR CARE GUIDE

In order to protect your beautiful new **PROJECT FLOORS** floor, please follow this simple floor care guide.

Using the correct products is essential and the Dr. Schutz Floor Care Kit contains all you need to care for a 15m2 floor area for a full year. The maintenance products in the kit can also be purchased individually as required.

Dr. Schutz Floor Care Kit contains:

- 1 x 750ml bottle of Clean & Strip
- 1 x 750ml bottle of Floor Mat Sealer
- 1 x 750 ml bottle of Floor Cleaner
- 1 x Blue applicator head
- 1 x Green scrubbing pad
- 1 x White polishing pad
- 1 x Packet of furniture leg protectors

www.drschutz.co.uk

After your new floor has been installed:

Apply the self adhesive furniture protectors to all items of movable furniture. This will help avoid any scratching or scuffing. Don't drag or slide any furniture or appliances over your new floor.

Make sure that you have a good size, fibre mat at all entrances. This will help to minimize the dirt and abrasive grit that can be brought in from the outside.

Remember to clean this mat regularly. Avoid using a rubber backed mat because some types of rubber can cause permanent discolouration to your floor. If you need advice on the right type of mat, speak to your flooring retailer.

Before using any cleaning fluids, leave your new floor for at least 24 hours to allow the adhesive to set. During this period just sweep the floor with a soft brush to remove any dust.

Step 1

After 24 hours use the **Dr. Schutz Clean & Strip** to remove any adhesive and soiling that may have been left during installation. When using the Dr. Schutz Clean & strip and the other cleaning products it is always advisable to wear rubber gloves.

Dilute the Dr. Schutz Clean & Strip into a bucket at a ratio of 1 part Clean & Strip to 5 parts clean water. As a rough guide 4 divider lines on the bottle should be added to 1 litre of water and this solution should be sufficient to clean approximately 10m2.

Once diluted spread the solution over the floor with a clean mop remembering to rinse the mop once you have finished. Leave the Dr. Schutz Clean & Strip for around 5 minutes to release any dirt, but don't let the floor dry out.

After 5 minutes scrub the entire floor using the Green scrubbing pad fixed to the Blue applicator head. Make sure that the Green pad is always wet when scrubbing.

Once scrubbed, remove the residue from the floor with a mop and then rinse the floor thoroughly with a clean mop and clean water. This is important to ensure a clean surface for the application of the floor sealer.

Step 2

Once the floor is dry, you can apply the **Dr. Schutz Floor Mat Sealer**. It is usually best to apply the Dr. Schutz Floor Mat Sealer before you go to bed so that it can dry out fully before being walked on.

The Dr. Schutz Floor Mat Sealer is applied without any dilution, simply pour a small amount on to the floor and using the blue applicator head fitted with the white polishing pad, spread a thin layer over your floor. Work in one direction for the first coat, and at 90 degrees for the second coat ensuring full and even coverage. Once you have finished, rinse the White polishing pad thoroughly in clean water and wring to dry.

Leave the first coat for 30-40 minutes or until it is dry to the touch then repeat the application for a second coat. Leave the floor for at least 6 hours to allow both coats to fully dry. Remember, it is easier, and the results are better, to apply thin layers rather than trying to apply one thick coating.

Step 3

For routine cleaning ensure that the floor is swept or vacuumed daily to remove all dust and any loose dirt.

The **Dr. Schutz Floor Cleaner** should be used regularly to clean and maintain your floor. Dilute the Dr. Schutz Floor Cleaner in a ratio of 1 part Dr. Schutz Floor Cleaner to 200 parts clean water (which is approximately 1 divider line on the bottle to 8—10 litres of clean water). Using a clean mop, simply damp mop the floor then allow it to dry. Do not wet or flood the area. This will restore and clean your floor.

Step 4

From time to time you will need to replace the **Dr. Schutz Floor Mat Sealer**. In normal wear situations this is usually once every 6 months. To replace the Dr. Schutz Floor Mat Sealer, simply repeat Steps 1& 2.

By following these simple procedures you will enhance the beauty of your floor and protect it throughout its life. Please ask your retailer for a Dr Schutz floor care kit. Please note, steam mops are not recommended for use with luxury vinyl tile floors.

Remember to keep all cleaning materials well out of the reach of children
